**Vol. 10, No. 4 (2013), pages 1609-2028**

**Contents**

|                                                                                                                                                                                      |           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| S. Capparelli and P. Maroscia<br><i>On Two Sequences of Orthogonal Polynomials Related to Jordan Blocks</i> .....                                                                    | 1609-1630 |
| G. Aranda Pino and L. Vaš<br><i>Noetherian Leavitt Path Algebras and Their Regular Algebras</i> .....                                                                                | 1631-1654 |
| S. Ali, A. Fošner, M. Fošner and M. S. Khan<br><i>On Generalized Jordan Triple <math>(\alpha, \beta)</math>-Derivations and related Mappings</i> .....                               | 1655-1666 |
| H. Larki<br><i>Leavitt Path Algebras of Edge-Colored Graphs</i> .....                                                                                                                | 1667-1682 |
| F. Qi and C. Berg<br><i>Complete Monotonicity of a Difference Between the Exponential and Trigamma Functions and Properties Related to a Modified Bessel Function</i> .....          | 1683-1694 |
| M. Krnić, J. Pečarić and P. Vuković<br><i>A Unified Treatment of Half-Discrete Hilbert-Type Inequalities with a Homogeneous Kernel</i> .....                                         | 1695-1714 |
| B. Lisená<br><i>Asymptotic Properties in a Delay Differential Inequality with Periodic Coefficients</i> .....                                                                        | 1715-1728 |
| Y. Jalilian and R. Jalilian<br><i>Existence of Solution for Delay Fractional Differential Equations</i> .....                                                                        | 1729-1746 |
| J. Llibre and C. Valls<br><i>Generalized Weierstrass Integrability of the Abel Differential Equations</i> .....                                                                      | 1747-1758 |
| P. Álvarez-Caudevilla, J. D. Evans and V. A. Galaktionov<br><i>The Cauchy problem for a tenth-order thin film equation I. Bifurcation of oscillatory fundamental solutions</i> ..... | 1759-1790 |
| A. Boughammoura<br><i>Homogenization of a Highly Heterogeneous Elastic-Viscoelastic Composite Materials</i> .....                                                                    | 1791-1810 |

|                                                                                                                 |           |
|-----------------------------------------------------------------------------------------------------------------|-----------|
| M. Stojanovic                                                                                                   |           |
| <i>Wave Equation Driven by Fractional Generalized Stochastic Processes</i> .....                                | 1811-1829 |
| C. Bardaro and I. Mantellini                                                                                    |           |
| <i>On Linear Combinations of Multivariate Generalized Sampling Type Series</i> .....                            | 1831-1850 |
| C. Ferreira, J. L. López and E. Pérez Sinuía                                                                    |           |
| <i>The Second Appell Function for one Large Variable</i> .....                                                  | 1851-1864 |
| B. Wróbel                                                                                                       |           |
| <i>Laplace Type Multipliers for Laguerre Expansions of Hermite Type</i> .....                                   | 1865-1879 |
| A. Osękowski                                                                                                    |           |
| <i>Sharp Logarithmic Bounds for Beurling-Ahlfors Operator Restricted to the Class of Radial Functions</i> ..... | 1881-1892 |
| M. Baronti and P. L. Papini                                                                                     |           |
| <i>On Some Types of Rigid Sets in Banach Spaces</i> .....                                                       | 1893-1901 |
| Y. Yagoub-Zidi                                                                                                  |           |
| <i>Some Isometric Properties of Subspaces of Function Spaces</i> .....                                          | 1903-1913 |
| S. Lambert, K. Lee and A. Luttmann                                                                              |           |
| <i>On the Generality of Assuming that a Family of Continuous Functions Separates Points</i> .....               | 1915-1933 |
| I. Akbarbaglu and S. Maghsoudi                                                                                  |           |
| <i>Banach-Orlicz Algebras on a Locally Compact Group</i> .....                                                  | 1935-1945 |
| M. Abel and R. M. Pérez-Tiscareño                                                                               |           |
| <i>Locally Pseudoconvex Inductive Limit of Topological Algebras</i> .....                                       | 1947-1961 |
| P. Aiena, J. R. Guillén and P. Peña                                                                             |           |
| <i>Localized SVEP, property (b) and property (ab)</i> .....                                                     | 1963-1974 |
| I. K. Erken and C. Murathan                                                                                     |           |
| <i>A Class of 3-Dimensional Contact Metric Manifolds</i> .....                                                  | 1975-1991 |
| D. E. Dobbs and J. Shapiro                                                                                      |           |
| <i>On the Strong (A)-Rings of Mahdou and Hassani</i> .....                                                      | 1993-1995 |
| M. De Falco, F. de Giovanni and C. Musella                                                                      |           |
| <i>Groups whose Proper Subgroups of Infinite Rank Have a Transitive Normality Relation</i> .....                | 1997-2004 |
| S. Samko                                                                                                        |           |
| <i>Variable Exponent Herz Spaces</i> .....                                                                      | 2005-2023 |
