|                                                                                                                                                      |           |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| I. Vaisman<br><i>Foliated Lie and Courant Algebroids.....</i>                                                                                        | 415 - 444 |
| P. P. Ntumba<br><i>Cartan-Dieudonné Theorem for A-Modules.....</i>                                                                                   | 445 - 454 |
| N. Ben Salem and K. Touahri<br><i>Pizzeti Series and Polyharmonicity Associated with<br/>the Dunkl Laplacian .....</i>                               | 455 - 470 |
| G. A. Anastassiou and S. G. Gal<br><i>Approximation by Complex Bernstein-Durrmeyer Polynomials<br/>in Compact Disks .....</i>                        | 471 - 482 |
| C. Bardaro and I. Mantellini<br><i>A Quantitative Voronovskaya Formula for Mellin<br/>Convolution Operators.....</i>                                 | 483 - 501 |
| B. Amri, A. Gasmi and M. Sifi<br><i>Linear and Bilinear Multiplier Operators for the Dunkl Transform.....</i>                                        | 503 - 521 |
| A. Abouelaz<br><i>Explicit Inversion Formulas for the X-Ray Transform in <math>\mathbb{Z}^n</math> .....</i>                                         | 523 - 538 |
| P. Fernandez-Martinez, A. Manzano and E. Pustylnik<br><i>Absolutely Continuous Embeddings of Rearrangement-Invariant Spaces.....</i>                 | 539 - 552 |
| E. Karapinar and V. Zakharyuta<br><i>On Orlicz-Power Series Spaces.....</i>                                                                          | 553 - 563 |
| E. Wolf<br><i>Eigenvalues and Spectra of Composition Operators Acting on Weighted<br/>Bergman Spaces of Infinite Order on the Unit Polydisk.....</i> | 565 - 573 |
| M. G. Graziano and M. Pesce<br><i>A Note on the Private Core and Coalitional Fairness<br/>Under Asymmetric Information.....</i>                      | 575 - 603 |
