|                                                                                                                                                                                                     |         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| F. Wei and Z. Xiao<br><i>Generalized Jordan Derivations on Semiprime Rings and Its Applications<br/>in Range Inclusion Problems.....</i>                                                            | 271-291 |
| N. Mahdou and M. Tamekkante<br><i>Gorenstein Global Dimension of an Amalgamated Duplication of a<br/>Coherent Ring Along an Ideal .....</i>                                                         | 293-305 |
| G. Endimioni<br><i>Periodic Endomorphisms of Polycyclic Groups.....</i>                                                                                                                             | 307-313 |
| A. Boccuto and D. Candeloro<br><i>Differential Calculus in Riesz Spaces and Applications to g-Calculus.....</i>                                                                                     | 315-329 |
| G. Zamani Eskandani, P. Gavruta, J.M. Rassias and R.Zarghami<br><i>Generalized Hyers-Ulam Stability for a General Mixed Functional<br/>Equation in Quasi-<math>\beta</math>-Normed Spaces .....</i> | 341-359 |
| A. Antuna, J.L.G. Guirao and M.A. Lopez<br><i>An Asymptotic Sampling Recomposition Theorem for Gaussian Signals.....</i>                                                                            | 361-379 |
| G. T. Tachev<br><i>Approximation of a Continuous Curve by its Bernstein-Bezier Operator.....</i>                                                                                                    | 381-393 |
| D. Pinasco<br><i>Representable Functions on the Unit Ball of a Banach Space.....</i>                                                                                                                | 395-411 |
| M. Berkani, M. Sarih and H. Zariouh<br><i>Browder Type Theorems and SVEP.....</i>                                                                                                                   | 413-423 |
| W. Batat and S. Rahmani<br><i>Isometries, Geodesics and Jacopi Fiedls of Lorentzian Heisenberg Group.....</i>                                                                                       | 425-444 |
| E. de Amo, M.Diaz Carrillo and J. Fernandez-Sanchez<br><i>Measure-Preserving Functions and the Independence Copula.....</i>                                                                         | 445-464 |
| A. A. Dosiyeu<br><i>New Properties of 9-Point Finite Difference Solution of the Laplace Equation....</i>                                                                                            | 465-476 |
